An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Thomas Cole on December 27, 2004.

The application has been amended as follows:

In the Claims:

- 1) Claims 8-13 have been canceled.

The following is an examiner's statement of reasons for allowance:

Claims 1-7 are allowable over the prior art of record because the prior art of record does not teach or suggest the entire combination of elements of the web winding device set forth including a winding shaft at which a proximal end portion of a long belt-form webbing belt is anchored; a slave shaft coaxially and integrally attached to the winding shaft; a motor side rotating body including a peripheral wall, at an inner side of which the slave shaft is disposed at a vicinity of an axial center of the motor side rotating body, the motor side rotating body being coaxially relatively rotatable with respect to the slave shaft, and the motor side rotating body receiving driving force from driving means for rotating about the axial center of the slave shaft; a ring-form intermediate rotating body disposed at the inner side of the peripheral wall, between the slave shaft and the peripheral wall, the intermediate rotating body being relatively rotatable about the axial center of the motor side rotating body with respect to both the motor side rotating body and the slave shaft; a coupling member disposed between the intermediate rotating body

Art Unit: 3654

and an outer peripheral portion of the slave shaft, the coupling member mechanically coupling the intermediate rotating body with the slave shaft in conjunction with rotation of the motor side rotating body; and a torque limiter disposed between an inner peripheral portion of the peripheral wall and an outer peripheral portion of the intermediate rotating body, the torque limiter including one portion which is anchored at one of the peripheral wall and the intermediate rotating body and another portion which is engaged with the other of the peripheral wall and the intermediate rotating body, the torque limiter mechanically coupling the peripheral wall with the intermediate rotating body and the engagement being released by a relative rotation force of the peripheral wall with respect to the intermediate rotating body of at least a predetermined value.

None of the references of the prior art teach or suggest the combination of elements of the web winding device as advanced above and such does not provide the necessary motivation, absent applicant's specification, for modifying the web winding device in the manner required by the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
